PAID SUBSCRIBER EDITION — WEEK 27

\$ Dollar Note \$

The Weekly Edition. Institutional grid analysis for the trader who prepares.

WEEK 27 | FRIDAY, 3 JULY 2026 | 11H22 SAST

DXY 100.69 ▲ +0.08% | USD BIAS LONG | PHASE WEEK 1 D3 BACKSIDE | TARGET 104.24 (MONTHLY LHF)

01 OPENING FRAME

The USD closed June in breakout. Structural fact, not opinion. The monthly candle printed above the High Close of May. The weekly cycle completed Week 4 with Close In Breakout at **101.08**. These are the signals institutional capital leaves when it commits to direction.

Now we stand at the closing range of Week 1 July. **D3 Backside**. US markets close early for Independence Day. Low liquidity, high noise. The bias formed on Tuesday and Thursday must hold into the close for continuation into Week 2.

This is the Dollar Note Weekly Edition. Paid subscriber content. Not for distribution.

02 WHAT JUST HAPPENED

DAY	PHASE	SIGNAL	KEY LEVEL
Tue 1 Jul	D1 Opening Range	July gap open. CIB first green day. Above June close.	100.25
Wed 2 Jul	D2 Mid-point	Consolidation coil. NFP positioning. Structure building.	100.69

DAY	PHASE	SIGNAL	KEY LEVEL
Thu 3 Jul	D3 Backside — Closing Range	NFP released. US markets close early. Week's bias confirmed.	100.69

Week 1 opened with a gap on Tuesday July 1 — the first trading day of the month. The signal day (CIB) printed immediately. Wednesday was the mid-point coil, structure building into NFP. Thursday was D3 Backside, the closing range, with NFP released and US markets closing early for Independence Day.

The compressed week means less time for structure to develop, but the signals that have presented are clear.

03 LIVE JOURNAL — FRIDAY 11H22

The \$ has CIB short from the 1st day of the month.

Thu LOD is **100.42** (near major Institutional level 100.50).

Price is still inside the LOW range and has made a 3 push dump following a gap HH (inside Thu range) at the open of day.

LOD is **100.52** (Major level).

Notes:

1. Given all the current signals, we can still anticipate a continued Bullish trend (validating the Monthly chart structure and signals) for the month of July, with this being the beginning given price formed a multi day structure at a major Institutional level (100.50) and a BO Level.
2. Price may still drop but that is looking far less probable, however we do not ignore this. **PAY ATTENTION to what is PRESENTED then FOLLOW the PROCESS in the TIMING WINDOW.**
3. **STICK to the PLAN and manage risk correctly in your favour when executing a setup given we are net profit for the beginning of July and should start off W2 July in the same position while we wait (like a jaguar in the night ready to pounce on its prey).**

COHERENT CAPITAL

04 ANTICIPATED STRUCTURE

The DXY daily chart shows the classic **BO → PB → CON** sequence. Breakout above the June high, pullback to the institutional level at 100.50, now consolidating for continuation.

🕒 11:05 SAST · 3 Jul 2026

● LIVE

The 3-push dump after the gap HH is textbook consolidation behaviour. Price is holding above the 100.50 institutional level — a level with memory. The moving averages are fanning bullish. The structure suggests continuation, not reversal.

But we do not marry the bias. We wait for the coil in the ignition window. We execute with fixed risk. And we stick to the plan.

05 TRADE EXECUTION — GER40 BUY LOW

✓ EXECUTED — BUY

Instrument: GER40 / DAX40

Setup: First Green Day (FGD) Buy Low

Result: +\$175.77 USD

Account Balance: \$5,147

The Sequence:

Tuesday: Signal day — CIB first green day confirmed.

Wednesday: Signal on the day — Higher Highs given. Coil showed up at the CP level in the Ignition window.

Thursday: Left the setup to hit TP. No intervention. No emotion. Just the plan.

GER40 EXECUTION — +\$175.77

"The grid works when you wait for all signals. Signal day → Signal on the day → Coil → Ignition Window. Every condition present. Every box checked. The result is a byproduct of the process."

— COHERENT CAPITAL PRIVATE PLAYBOOK

06 WHAT COMES NEXT

Monthly: July opened in breakout. First Green Week potential. LHF at 104.24 remains the structural north star.

Weekly: Week 1 closing range today. If the bias holds into the close, Week 2 opens with continuation momentum. If not, we reset and wait.

Daily: D3 Backside. The true test of conviction. Institutional positions are either held or reduced before the long weekend.

Levels to Watch:

100.50 — Major institutional level. Current floor. The jaguar waits here.

100.69 — April HOM. Current pivot.

101.25–101.50 — Institutional grid zone. First extension target.

101.72 — June HOW. Resistance.

104.24 — Monthly LHF. The far target. The structure knows it is there.

COHERENT CAPITAL

07 PROCESS CHECK

This week, ask yourself:

- 01 Did I prepare before the session?
- 02 Did I identify the signal day and the signal on the day?
- 03 Did I wait for the coil in the ignition window?
- 04 Did I execute with fixed risk?
- 05 Did I evaluate without emotion?

Five questions. No score. Just awareness.

The 1% compounds in the gap between knowing and doing.

STICK TO THE PLAN.

08 THE NOTE

The USD is in BO short of the 1st day of the month. Price is currently at 100.69. We are waiting for the close of day to find out if the BO will succeed or not.

This was written Thursday. It remains true Friday. The breakout is young. One day does not confirm a month. The grid cycle teaches: confirmation comes in stages, and the patient trader collects at each stage.

Do not ignore that price may continue short, despite being short-lived, since there is LHF on the Monthly chart.

We are net profit for the beginning of July. We start Week 2 in the same position — waiting, like a jaguar in the night, ready to pounce on the prey the market presents.

Stick to the plan.

"Like a jaguar in the night — patient, disciplined, ready to pounce."
